

Kyriazis, Jorgos

I am a member of the VDA Project Group "Fahrzeugelektrik", involved in the KBL development from the very first ideas until today, also involved in VEC development from the very start. I am working at Volkswagen at the IT department, there responsible for the project ELENA (ELECTRICAL ENGINEERING Application). ELENA is a central building block of VOBES, which is the toolchain and process used to design the electrical network in every car project within the Volkswagen Group.
